

AGC Solutions Guide

“Your Dreams, Our Challenge”

Established 100 years ago, AGC has evolved into a world leading supplier of : architectural / automotive glass, electronic materials such as CMP slurries and silicon carbide, chemicals including fluoro products and refrigerant gases, ceramics such as refractory materials and now multi materials.

AGC’s multi material division is focused on the development of dielectric substrates for high frequency electronics such as high-speed wired and wireless communication, intelligent vehicle, aerospace & defense and next generation satellite communication.

AGC is providing the broadest range of low loss base materials

Advanced PCB Materials

Your Dreams, Our Challenge

AGC's Multi Material division develops and manufactures a full range of RF and Digital Materials, including thermoset and thermoplastic copper clad laminates and prepreg / bondply substrates, which provide high reliability and superior thermal, mechanical and electrical performance.

Thermoplastic materials are designed for critical RF/Microwave components, antennas, power amplifiers and subassemblies. Superior mechanical and electrical performance make the PTFE resin system the material of choice for your lowest loss, high frequency applications.

Thermoset materials are intended for use in core routers, high speed switches, supercomputers, next-generation radio communication and applications where low signal attenuation, high reliability and high data transfer rates are critical.

PTFE Resin System

Note :

1. All test data provided are typical values and not intended to be specification values.
2. CTE ⁽¹⁾ values vary by temperature range of measurement. Please inquire for specific product temperature range.
3. ⁽²⁾ Measured by IPC-TM-650 method 2.5.5.5.1 (modified stripline) at 1.9 GHz.
4. Please refer to the data sheet for each product for detailed values.

Copper Cladding For RF Materials

Optical measurements (e.g. Bruker Optical Measurements)

Description	Surface Roughness RMS Treated side		Surface Roughness RMS Untreated side	
	Microinches	Microns	Microinches	Microns
Ultra Low Profile ½ oz	Comparable to rolled copper - see scanning electronmicroscope images below			
Ultra Low Profile 1 oz				
Rolled-Annealed ½ oz	15	0.37	12	0.31
Rolled-Annealed 1 oz	11	0.28	9	0.24
Reverse Treated Electrodeposited ½ oz	46	1.16	44	1.12
Reverse Treated Electrodeposited 1 oz	39	1.00	52	1.31
High Ductility Very Low Profile Electrodeposited ½ oz	66	1.68	18	0.46
High Ductility Very Low Profile Electrodeposited 1 oz	60	1.54	19	0.49

* Above copper foil types may not be available for all AGC products, please contact your technical service representative with questions.

Rolled-Annealed Copper
(Treated surface)
x 3,000

Rolled-Annealed Copper
(Cross section)
x 1,000

Ultra Low Profile Copper
(Treated surface)
x 3,000

Ultra Low Profile Copper
(Cross section)
x 1,000

Resistor foils available upon request.

- ½ oz. copper = 0.7 mils or 17.5 microns
- 1 oz. copper = 1.4 mils or 35.0 microns
- 2 oz. and other coppers available upon request

Optical measurements are not accurate to characterize the differences between ultra low profile and rolled-annealed copper. Scanning electron microscope analysis shows a very comparable surface roughness. Insertion loss comparisons are available by request.

Common Panel Sizes

Description	Common Panel Size
PTFE Materials	36" × 48", 18" × 24", 18" × 16", 18" × 12"
<i>fastRise</i> ™	18" × 24", 18" × 16", 18" × 12", 24" × 36"

Definitions:

LP	Low profile 5-10 micron
VLP	Very Low profile <5.0 micron
VSP and HVLP	Very Smooth or Hyper Low profile <2 micron
ULP / e-VLP / HS2-VSP	Ultra Low profile or Extreme Low profile ≤1 micron
Hyper Smooth Profile	≤1 micron
H.T.E.	High temperature elongation IPC-CF-150, Class 3
ED	Electrodeposited copper
RA	Rolled Annealed – not Available on AGC Digital PCB Materials

Specialty Copper Types:

Specialty copper types may be available, please contact your sales or technical representative:

- MLSG3 / RTF2
- HS1-MS1-VSP
- SI Copper
- Double Treat
- Grade 3 HTE Shiny
- Resistor foils
- Unclad (textured or smooth finish)

Specialty Coppers Weights:

Specialty copper weights may be available, please contact your sales or technical representative:

3/8 oz "T"	12 μm
3 oz	105 μm
4 oz	140 μm
5 oz	175 μm
6 oz	210 μm
7 oz	245 μm

Regarding resistor copper foils

- OhmegaPly®, Ticer® and other resistor foils available upon request.
- The resistor foil manufacturer covers the warranty for the copper foil that includes the resistor layer, as well as the performance and workability related to the copper foil. Our company does not take responsibility for the processing of these resistor layers and the performance or workability of the final products.

A Wide Lineup of Products
